WORK EXPERIENCE

Software Engineer & Shopify Web Developer **January 2026 – August 2026**
The Standard Lab (International Company) | Freelance, Remote

- Designed, built, and deployed a full-stack creative-operations dashboard (creative-dashboard.vercel.app) that runs the team's ad-production pipeline from concept to performance results, replacing spreadsheets and chat threads for 50 team members.
- Turned the marketing team's copy documents into custom HTML/CSS landing pages and published them on the Shopify store, editing the theme so each page matched the brand and linked directly to products and checkout.
- Developed it end to end with Next.js, TypeScript, and Supabase (PostgreSQL): stage-gated workflow, role-based access control (RBAC), submit/approve/revision flow with automatic task routing, autosave, and real-time data.
- Built an AI copywriting feature on the Claude and Gemini APIs that analyzes competitor ads from text, image, URL, and video inputs and generates tailored ad copy, cutting copy drafting time from 6 hours to 1 minute.
- Deployed and maintained the app in production on Vercel, handling Supabase authentication, secure server-side API routes, environment configuration, and database setup, and resolved production bugs as they surfaced.
- Built the company's in-house parcel tracking and returns platform for its Shopify store (see Projects: Standard Lab Tracking).

Field Service Engineer Intern **July 2025 – October 2025**
TOWA Semiconductor Equipment Philippines Corporation

- Assisted senior Field Service Engineers in maintaining, troubleshooting, and updating semiconductor production machines, including TOWA and PMC 2030 models.
- Performed PLC and HMI software backups and version upgrades, ensuring stable machine operations and data integrity.
- Participated in technical training sessions on machine operation and maintenance, including the Y1-R and MDTW007 machines.

Freelance Video Editor (with AI Integration) / Social Media VA **May 2024 – June 2025**
Connex Media

- Integrated advanced AI generative tools (such as Higgsfield, Google Veo, Grok, and Kling) to generate custom B-roll, enhance visual storytelling, and accelerate the video production workflow.
- Edited both long-form and short-form videos, tailoring pacing, transitions, and formatting to suit each platform's audience and content goals.
- Maintained a 100% on-time delivery rate, successfully managing tight deadlines and last-minute client revisions.
- Leveraged AI tools for efficient caption writing, hashtag research, and trend analysis to support content visibility.
- Managed the cross-platform content calendar to ensure consistent posting schedules and organized media assets using Google Workspace.

Member Services Specialist / IT Support **July 2023 – April 2024**
Social Security System (SSS)

- Conducted hours of technical training for employees, focusing on software troubleshooting and navigation to resolve common client issues.
- Implemented a streamlined online system that improved client accessibility and reduced processing time by 30%.
- Provided technical support and troubleshooting, diagnosing and resolving system errors to ensure a seamless user experience.
- Performed high-volume data entry with strict attention to accuracy and efficiency.
- Conducted warm calls to clients to resolve information discrepancies, ensuring data integrity and accurate record-keeping.
- Created daily appointment and queue management schedules for clients, optimizing foot traffic flow to reduce wait times and ensure orderly service delivery during peak operational hours.

PROJECTS

Standard Lab Tracking – Parcel Tracking & Returns Platform
standardlabtracking.com

- Built the full app end to end: an in-house parcel tracking and returns platform for the company's Shopify store that replaced a paid third-party tracking app with a branded tracking page on the company's own domain.
- Integrated the 17TRACK API to register and poll 10,000+ parcels across multiple carriers, turning raw carrier updates into one clear status timeline so customers and the team always see where an order is.
- Deployed and maintained the app in production on Vercel with Supabase authentication, Shopify OAuth, and signature-verified webhooks that pull in orders and fulfillments automatically.

- Automated customer shipping updates through 7 Klaviyo email flows, from shipped to delivered, sending 150+ notifications a day with zero failures.

BraillTap – Smart Braille Keyboard with Text-to-Speech

- Co-developed a Raspberry Pi 4–based Braille keyboard with a 3D-printed enclosure. Its six-key layout matches the Braille machines SPED teachers already use, so students don't have to learn a new layout.
- Integrated real-time text-to-speech feedback using a PCM5102 I2S DAC and a PAM8403 amplifier. Each letter or word is read aloud as it's typed, so students can catch and fix mistakes without a teacher beside them.
- Added Grade 2 Braille contraction support for both English and Filipino (Tagalog). Students commonly struggle with contractions on the traditional slate and stylus.
- Evaluated the prototype in a five-day study with a visually impaired student from Biñan Elementary School, compared against the slate and stylus. Typing errors dropped to zero by the final days, and average contraction accuracy rose from 72.5% to 93.3%.

SKILLS

Full-Stack Development: JavaScript, TypeScript, React, Next.js, HTML, CSS
Backend & Databases: SQL, PostgreSQL, Supabase, REST APIs
AI Integration: Claude (including Claude Code), Gemini, Higgsfield, Google Veo, Grok, Kling, N8N, prompt engineering, AI-powered apps
Cloud & Deployment: Vercel, Git/GitHub, environment configuration
Programming Languages: Python, Java, C#
Tools: VS Code, Cursor, Google Workspace, Google Calendar, Microsoft Office Suite (Word, Excel, PowerPoint)
Multimedia: Video editing, content creation, CapCut
Other Technical: Microcontrollers (Arduino), Cisco & networking fundamentals, technical writing, data entry, warm calling, CRM management
Soft Skills: Communication, adaptability, critical thinking, work ethic, time management, teamwork, attention to detail, leadership
